

## *Oatlands Park* **HOTEL**

### **Oatlands Park Hotel Sustainability Charter**

The hotel has been awarded the Greengage ECO-Smart Silver Award in 2023

To ensure that we are managing our energy efficiently, all our spotlights are fitted with LED Lighting, our energy use is tracked for our Water, Electricity and Gas. We have installed 5 EV chargers and motion sensitive lighting within the building.

We also have systems in place for addressing our water conservation, all our toilets have valves fitted to them to reduce the amount of water flow, also they have dual flush systems on them, we have flow restrictors fitted to our showers and taps in all bathrooms.

Waste management, we recycle all paper, plastic card and metal via our local authority waste management program. We are also working through the hotel removing single use plastic items where we can.

Our policy is to source local food produce and other products for the hotels operation as much as possible.

We engage well with the local community; our grounds are included in the register of gardens and parkland of special historic interest. We partner with local charities to support community programs.

As part of our waste reduction guests are offered the option to reuse linens and towels with clear visible signs in the rooms and bathrooms.

We track all our sustainability efforts and progress, through the Greengage Eco Smart application which produces an annual report to track our progress towards us achieving gold status.
